Science Assessment

# 2005 NAEP REPORT for North Carolina

- Fourth Grade Science
- Eighth Grade Science

**PUBLIC SCHOOLS OF NORTH CAROLINA**

State Board of Education :: Howard N. Lee, Chairman

Department of Public Instruction :: June St. Clair Atkinson, State Superintendent

North Carolina Testing Program/Accountability Services | Raleigh, NC 27601-2825

May 2006

## **STATE BOARD OF EDUCATION**

**HOWARD N. LEE**  
Chairman :: Raleigh

**SHIRLEY E. HARRIS**  
Troy

**JOHN TATE III**  
Charlotte

**JANE P. NORWOOD**  
Vice Chair :: Charlotte

**MELISSA E. BARTLETT**  
 Mooresville

**PATRICIA N. WILLOUGHBY**  
Raleigh

**KATHY A. TAFT**  
Greenville

**ROBERT "TOM" SPEED**  
Boone

**BEVERLY PERDUE**  
Lieutenant Governor :: New Bern

**MICHELLE HOWARD-VITAL**  
Wilmington

**WAYNE MCDEVITT**  
Asheville

**RICHARD MOORE**  
State Treasurer :: Kittrell

**EDGAR D. MURPHY**  
Durham

## **NC DEPARTMENT OF PUBLIC INSTRUCTION**

**June St. Clair Atkinson, Ed.D., State Superintendent**

**301 N. Wilmington Street :: Raleigh, North Carolina 27601-2825**

In compliance with federal law, NC Public Schools administers all state-operated educational programs, employment activities and admissions without discrimination because of race, religion, national or ethnic origin, color, age, military service, disability, or gender, except where exemption is appropriate and allowed by law.

**Inquiries or complaints regarding discrimination issues should be directed to:**

Dr. Elsie C. Leak, Associate Superintendent :: Office of Curriculum and School Reform Services  
6307 Mail Service Center :: Raleigh, NC 27699-6307 :: Telephone 919-807-3761 :: Fax 919-807-3767

**Visit us on the Web:: [www.ncpublicschools.org](http://www.ncpublicschools.org)**

8-A	Percentage of all students in science assessments identified as SD and ELL, excluded, and assessed, grade 4	41
8-B	Percentage of all students in science assessments identified as SD and ELL, excluded, and assessed, grade 8	42
9-A	Average science scale scores and percentage of students at or above each achievement level, by students' disability status, grade 4	43
9-B	Average science scale scores and percentage of students at or above each achievement level, by students' disability status, grade 8	44
10-A	Average science scale scores and percentage of students at or above each achievement level, by students' classification as English language learners (ELL), grade 4	45
10-B	Average science scale scores and percentage of students at or above each achievement level, by students' classification as English language learners (ELL), grade 8	46
11	Total number of students assessed, percentage of students who were excluded, and average science scale scores, grades 4 and 8	47-48

This report provides selected results from the National Assessment of Educational Progress (NAEP) for North Carolina's public school students at grades 4 and 8. Starting in 1996, science has been assessed in three different years at the state level (at grade 8 in 1996, and at both grades 4 and 8 in 2000 and 2005).

In the 2005 assessment, 45 jurisdictions participated: 44 states and the Department of Defense Education Activity Schools (domestic and overseas). North Carolina participated and met the criteria for reporting public school results.

NAEP is a project of the National Center for Education Statistics (NCES). For more information about the assessment, see *The Nation's Report Card, Science 2005*, which is available on the NAEP Web site along with the full set of national and state results in an interactive database (<http://nces.ed.gov/nationsreportcard/>). Released test questions, scoring guides, and question-level performance data are also available on the Web site.

## KEY FINDINGS FOR 2005

### For grade 4:

- The average science score for students in North Carolina was 149. This was not significantly different from that in 2000 (148).
- North Carolina's average score (149) was not significantly different from that of the nation's public schools (149).
- In North Carolina, 25 percent of students performed at or above *Proficient*. This was not significantly different from that in 2000 (24 percent).
- In North Carolina, the percentage of students who performed at or above *Proficient* was not significantly different from that for the nation's public schools (27 percent).
- The percentage of students in North Carolina who performed at or above *Basic* was 65 percent. This was not significantly different from that in 2000 (64 percent).
- In North Carolina, the percentage of students who performed at or above *Basic* was not significantly different from that for the nation's public schools (66 percent).

### For grade 8:

- The average science score for students in North Carolina was 144. This was not significantly different from that in 1996 (147) and was not significantly different from that in 2000 (145).
- North Carolina's average score (144) was lower than that of the nation's public schools (147).
- In North Carolina, 22 percent of students performed at or above *Proficient*. This was not significantly different from that in 1996 (24 percent) and was not significantly different from that in 2000 (25 percent).
- In North Carolina, the percentage of students who performed at or above *Proficient* was smaller than that for the nation's public schools (27 percent).
- The percentage of students in North Carolina who performed at or above *Basic* was 53 percent. This was not significantly different from that in 1996 (56 percent) and was not significantly different from that in 2000 (54 percent).
- In North Carolina, the percentage of students who performed at or above *Basic* was smaller than that for the nation's public schools (57 percent).

The U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP) has provided software that generated user-selectable data, statistical significance test result statements, and technical descriptions of the NAEP assessments for this report. Content may be added or edited by states or other jurisdictions. This document, therefore, is not an official publication of the National Center for Education Statistics.

## INTRODUCTION

### What Was Assessed?

The content for each NAEP assessment is determined by the National Assessment Governing Board (NAGB). The objectives for each NAEP assessment are described in a “framework,” a document that delineates the important content and process areas to be measured, as well as the types of questions to be included in the assessment.

The Science Framework for the 2005 National Assessment of Educational Progress guided the 2005 assessment. The same framework was used by NAGB for the 1996 and 2000 science assessments. The 2005 framework document can be accessed at the NAGB Web site at [http://www.nagb.org/pubs/s\\_framework\\_05/761907-ScienceFramework.pdf](http://www.nagb.org/pubs/s_framework_05/761907-ScienceFramework.pdf).

The science framework is organized along two major dimensions: Fields of Science, including Earth, physical and life sciences; and Knowing and Doing Science, including conceptual understanding, scientific investigation, and practical reasoning. Each assessment question is categorized as primarily measuring one of the elements of knowing and doing within one of the fields of science.

To ensure that the NAEP assessment integrates the three fields of Science rather than simply assessing three separate content areas, the framework specifies two overarching domains that describe science: the nature of science and themes. The nature of science incorporates the historical development of science and technology, the habits of mind that characterize these fields, and methods of inquiry and problem-solving. It also encompasses the nature of technology. Themes are the “big ideas” that transcend the various scientific disciplines, and include systems, models and patterns of change. The overarching domains pertain to a subset of questions within the assessment.

A combination of multiple-choice and constructed-response questions was used to assess students’ knowledge of important facts and concepts and to probe their analytical and problem solving skills. Constructed-response questions ask students to explain, apply, design, and communicate scientific information. In addition, about half of the students assessed were administered a hands-on task that probes students’ abilities to use materials to perform investigations, evaluate experimental results, and apply problem-solving skills. The same series of test booklets was used in both the national and the state assessments. Each student receives only a portion of the assessment, consisting of a booklet containing two 25-minute sections of science questions. Released test questions, along with student performance data by state, are available on the NAEP Web site (<http://nces.ed.gov/nationsreportcard/itmrls/>).

## Who Was Assessed?

Forty-five jurisdictions participated in the voluntary NAEP science assessment in 2005: This number included 44 states and the Department of Defense Education Activity Schools (domestic and overseas). The District of Columbia, normally a part of NAEP state assessments, did not participate in the science assessment because the mandatory reading and mathematics samples did not allow sufficient student samples for the third subject. The target sample for each state or other jurisdiction was approximately 100 schools at each grade tested and approximately 3,000 students for each subject at each grade, except in small or sparsely populated jurisdictions.

In North Carolina, 175 grade 4 schools and 140 grade 8 schools participated in the 2005 NAEP science assessments. Approximately 4,000 fourth-grade and approximately 4,000 eighth-grade students participated.

The sample of schools and students was chosen in a two-stage sampling process. First, the sample of schools was selected by probability sampling methods. Then, within the participating schools, random samples of students were chosen.

Beginning with the NAEP reading and writing assessments in 2002, the national sample was obtained by aggregating the samples from each state. The national results for science in 2005 include the results from the states and from a sample of private schools, weighted appropriately to represent the U.S. student population. Only public schools, however, are included in the state reports. State results are compared to national results for public school students within the report tables.

The NAEP state assessment in science was first administered to public school students at grade 8 in 1996 and was expanded to include students at grade 4 as well as grade 8 in 2000 and again in 2005.

The overall participation rates for schools and students must meet guidelines established by the National Center for Education Statistics (NCES) and the National Assessment Governing Board (NAGB) in order for assessment results to be reported publicly. Participation rates for the original sample needed to be at least 85 percent for schools in each grade.

Participation rates for the 2005 science assessment are available at the NAEP Web site (<http://nces.ed.gov/nationsreportcard/science/sampledesign.asp>).

## How Is Student Science Performance Reported?

The results of student performance on the NAEP assessments are reported for various groups of students (e.g., fourth-grade female students, eighth-grade Hispanic students, or students who took the assessment in a particular year). NAEP does not produce scores for individual students, nor does it report scores for schools or for school districts. Some large urban districts, however, have voluntarily participated in the assessment on a trial basis and were sampled as states were sampled. Science performance for groups of students is reported in two ways: as average scale scores and as achievement levels.

**Scale Scores:** Student performance is reported as an average score based on the NAEP science scale, which ranges from 0 to 300 and is linked to the corresponding scales in 1996 and 2000. Subscales were created to reflect performance on each of the three content areas defined in the NAEP science framework.

An overall composite scale was developed by weighting each of the science subscales (Earth, physical, and life) for the grade based on its relative importance in the framework. This composite scale is the metric used to present the average scale scores and selected percentiles used in NAEP reports. While the numeric scale score ranges are identical for each grade, the scales were derived independently for each grade. Therefore, scale scores across grades cannot be compared.

**Achievement Levels:** Student performance is also reported in terms of three achievement levels—*Basic*, *Proficient*, and *Advanced*. Results based on achievement levels are expressed in terms of the percentage of students who attained each level. The three achievement levels are defined as follows:

- *Basic*: This level denotes partial mastery of prerequisite knowledge and skills that are fundamental for proficient work at each grade.
- *Proficient*: This level represents solid academic performance for each grade assessed. Students reaching this level have demonstrated competency over challenging subject matter, including subject-matter knowledge, application of such knowledge to real-world situations, and analytical skills appropriate to the subject matter.
- *Advanced*: This level signifies superior performance.

*Note:* NAEP reports data at the below *Basic* level, but does not provide a description for below *Basic*.

The achievement levels are cumulative. Therefore, students performing at the *Proficient* level also display the competencies associated with the *Basic* level, and students at the *Advanced* level demonstrate the competencies associated with both the **Basic** and the *Proficient* levels.

The achievement levels are performance standards adopted by the National Assessment Governing Board (NAGB) as part of its statutory responsibilities mandated by Congress. The levels represent collective judgments of what students should know and be able to do for each grade tested. They are based on recommendations made by broadly representative panels of

classroom teachers, education specialists, and members of the general public from throughout the United States. As provided by law, the National Center for Education Statistics (NCES), upon review of congressionally mandated evaluations of NAEP, has determined that the achievement levels are to be used on a trial basis until it is determined that they are “reasonable, valid, and informative to the public” (No Child Left Behind Act of 2001, P.L., 107-110, 115 Stat.1425 [2002]). However, both NCES and NAGB believe these performance standards are useful for understanding trends in student achievement. They have been widely used by national and state officials as a common yardstick for academic performance. The science achievement-level descriptions are summarized in figures 1-A and 1-B.

<b>Figure 1-A</b>	<b>The Nation's Report Card 2005 State Assessment</b>
	<b>Descriptions of NAEP science achievement levels, grade 4</b>

<b>Basic Level (138)</b>	Students performing at the <i>Basic</i> level demonstrate some of the knowledge and reasoning required for understanding the Earth, physical, and life sciences at a level appropriate to grade 4. For example, they can carry out simple investigations and read uncomplicated graphs and diagrams. Students at this level also show a beginning understanding of classification, simple relationships, and energy.
----------------------------------	--

Fourth-grade students performing at the *Basic* level are able to follow simple procedures, manipulate simple materials, make observations, and record data. They are able to read simple graphs and diagrams and draw reasonable but limited conclusions based on data provided to them. These students can recognize appropriate experimental designs, although they are unable to justify their decisions.

When presented with diagrams, students at this level can identify seasons; distinguish between day and night; and place the position of the Earth, Sun, and planets. They are able to recognize major energy sources and simple energy changes. In addition, they show an understanding of the relationship between sound and vibrations. These students are able to identify organisms by physical characteristics and group organisms with similar physical features. They can also describe simple relationships among structure, function, habitat, life cycles, and different organisms.

<b>Proficient Level (170)</b>	Students performing at the <i>Proficient</i> level demonstrate the knowledge and reasoning required for understanding the Earth, physical, and life sciences at a level appropriate to grade 4. For example, they understand concepts relating to the Earth's features, physical properties, structure, and function. In addition, students can formulate solutions to familiar problems as well as show a beginning awareness of issues associated with technology.
---------------------------------------	--

Fourth-grade students performing at the *Proficient* level are able to provide an explanation of day and night when given a diagram. They can recognize major features of the Earth's surface and the impact of natural forces. They are also able to recognize water in its various forms in the water cycle and can suggest ways to conserve it. These students recognize that various materials possess different properties that make them useful. Students at this level are able to explain how structure and function help living things survive. They have a beginning awareness of the benefits and challenges associated with technology and recognize some human effects on the environment. They can also make straightforward predictions and justify their position.

<b>Advanced Level (205)</b>	Students performing at the <i>Advanced</i> level demonstrate a solid understanding of the Earth, physical, and life sciences as well as the ability to apply their understanding to practical situations at a level appropriate to grade 4. For example, they can perform and critique simple investigations, make connections from one or more of the sciences to predict or conclude, and apply fundamental concepts to practical applications.
-------------------------------------	---

Fourth-grade students performing at the *Advanced* level are able to combine information, data, and knowledge from one or more of the sciences to reach a conclusion or to make a valid prediction. They can also recognize, design, and explain simple experimental procedures.

Students at this level recognize nonrenewable sources of energy. They also recognize that light and sound travel at different speeds. These students understand some principles of ecology and are able to compare and contrast life cycles of various common organisms. In addition, they have a developmental awareness of the benefits and challenges associated with technology.

NOTE: The scores in parentheses indicate the cut point on the scale at which the achievement-level range begins.

<b>Figure 1-B</b>	<b>The Nation's Report Card 2005 State Assessment</b>
	<b>Descriptions of NAEP science achievement levels, grade 8</b>

<b><i>Basic</i></b> Level (143)	Students performing at the <i>Basic</i> level demonstrate some of the knowledge and reasoning required for understanding the Earth, physical, and life sciences at a level appropriate to grade 8. For example, they can carry out investigations and obtain information from graphs, diagrams, and tables. In addition, they demonstrate some understanding of concepts relating to the solar system and relative motion. Students at this level also have a beginning understanding of cause-and-effect relationships.
---------------------------------------	--

Eighth-grade students performing at the *Basic* level are able to observe, measure, collect, record, and compute data from investigations. They can read simple graphs and tables and are able to make simple data comparisons. These students are able to follow directions and use basic science equipment to perform simple experiments. In addition, they have an emerging ability to design experiments. Students at this level have some awareness of causal relationships. They recognize the position of planets and their movement around the Sun and know basic weather-related phenomena. These students can explain changes in position and motion such as the movement of a truck in relation to that of a car. They also have an emerging understanding of the interrelationships among plants, animals, and the environment.

<b><i>Proficient</i></b> Level (170)	Students performing at the <i>Proficient</i> level demonstrate much of the knowledge and many of the reasoning abilities essential for understanding the Earth, physical, and life sciences at a level appropriate to grade 8. For example, students can interpret graphic information, design simple investigations, and explain such scientific concepts as energy transfer. Students at this level also show an awareness of environmental issues, especially those addressing energy and pollution.
--	---

Eighth-grade students performing at the *Proficient* level are able to create, interpret, and make predictions from charts, diagrams, and graphs based on information provided to them or from their own investigations. They have the ability to design an experiment and have an emerging understanding of variables and controls. These students are able to read and interpret geographic and topographic maps. In addition, they have an emerging ability to use and understand models, can partially formulate explanations of their understanding of scientific phenomena, and can design plans to solve problems.

Students at this level can begin to identify forms of energy and describe the role of energy transformations in living and nonliving systems. They have knowledge of organization, gravity, and motion within the solar system and can identify some factors that shape the surface of the Earth. These students have some understanding of properties of materials and have an emerging understanding of the particulate nature of matter, especially the effect of temperature on states of matter. They also know that light and sound travel at different speeds and can apply their knowledge of force, speed, and motion. These students demonstrate a developmental understanding of the flow of energy from the Sun through living systems, especially plants. They know that organisms reproduce and that characteristics are inherited from previous generations. These students also understand that organisms are made up of cells and that cells have subcomponents with different functions. In addition, they are able to develop their own classification system based on physical characteristics. These students can list some effects of air and water pollution as well as demonstrate knowledge of the advantages and disadvantages of different energy sources in terms of how they affect the environment and the economy.

<b><i>Advanced</i></b> Level (208)	Students performing at the <i>Advanced</i> level demonstrate a solid understanding of the Earth, physical, and life sciences as well as the abilities required to apply their understanding in practical situations at a level appropriate to grade 8. For example, students can perform and critique the design of investigations, relate scientific concepts to each other, explain their reasoning, and discuss the impact of human activities on the environment.
--	---

Eighth-grade students performing at the *Advanced* level are able to provide an explanation for scientific results. They have a modest understanding of scale and are able to design a controlled experiment.

These students have an understanding of models as representations of natural systems and can describe energy transfer in living and nonliving systems. Students at this level are able to understand that present physical clues, including fossils and geological formations, are indications that the Earth has not always been the same and that the present is a key to understanding the past. They have a solid knowledge of forces and motions within the solar system and an emerging understanding of atmospheric pressure. These students can recognize a wide range of physical and chemical properties of matter and some of their interactions and understand some of the properties of light and sound. Also, they can infer relationships between structure and function. These students know the differences between plant and animal cells and can apply their knowledge of food as a source of energy to a practical situation. In addition, they are able to explain the impact of human activities on the environment and the economy.

NOTE: The scores in parentheses indicate the cut point on the scale at which the achievement-level range begins.

## **Assessing Students With Disabilities (SD) and/or English Language Learners (ELL)**

The results displayed in this report and official publications of NAEP 2005 results are based on representative samples that include students with disabilities (SD) and students who are English language learners (ELL). Some of these students were assessed using accommodations (such as extra time and testing in small groups). In state NAEP science assessments prior to 2000, no testing accommodations or adaptations were permitted for students with disabilities and students who were English language learners. However, research carried out by NAEP showed that the results for students who were accommodated could be combined with the results for unaccommodated students without compromising the validity of the NAEP scales in trend comparisons. Therefore, the students who were identified as SD or ELL and typically received accommodations in their classroom testing, and who required these accommodations to participate, also received them in the NAEP assessment, provided the accommodations did not change the nature of what was tested.

Students who had an Individualized Education Program (IEP) or were protected under Section 504 of the Rehabilitation Act of 1973 were to be included in the NAEP assessment except when:

- The school's IEP team determined that the student's cognitive functioning was so severely impaired that she or he could not participate; or
- The student's IEP required that the student had to be tested with an accommodation or adaptation that NAEP does not allow, and the student could not demonstrate his or her knowledge without that accommodation.

All ELL students who received academic instruction in English for three years or more were to be included in the assessment. Those ELL students who received instruction in English for less than three years were to be included unless school staff judged them to be incapable of participating in the assessment in English.

In 2000, NAEP was administered using a split sample of schools—one sample in which accommodations were permitted for special-needs students who normally received them and another sample in which accommodations were not permitted. Therefore, there were two different sets of results available for 2000. The results for both samples are shown in the tables in this report. Results for the assessment year where accommodations were not permitted in state NAEP assessments (1996) are reported in the same tables as the results where accommodations were permitted (2000 and 2005).

## **Cautions in Interpreting Results**

The averages and percentages in this report are estimates based on samples of students rather than on entire populations. Moreover, the collection of questions used at each grade level is only a sample of the many questions that could have been asked to assess the skills and abilities described in the NAEP framework. Therefore, the results are subject to a measure of uncertainty, reflected in the standard error of the estimates—a range of up to a few points above or below the score or percentage—which takes into account potential score fluctuation due to sampling error and measurement error. Statistical tests that factor in these standard errors are used to determine whether the differences between average scores or percentages are significant. All differences were tested for statistical significance at the .05 level.

NAEP sample sizes have increased since 2002 compared to previous years, resulting in smaller standard errors. As a consequence, smaller differences are detected as statistically significant than in previous assessments. In addition, estimates based on smaller groups are likely to have relatively large standard errors. As a consequence, some seemingly large differences may not be statistically significant. That is, it cannot be determined whether these differences are due to the particular makeup of the samples of students who were selected, or to true differences in the performance of the population of interest. The standard errors for the data in the tables of this report can be accessed online in the NAEP Data Explorer at (<http://nces.ed.gov/nationsreportcard/nde/>).

Differences between scores or between percentages are discussed in this report only when they are significant from a statistical perspective. Statistically significant differences are referred to as “significant differences” or “significantly different.” Significant differences between 2005 and prior assessments are marked with a notation (\*) in the tables. Any differences in scores within a year or across years that are mentioned in the text as “higher,” “lower,” “greater,” or “smaller” are statistically significant.

It is important to note that simple cross-tabulations of a variable with measures of educational achievement, like the ones presented in this report, cannot constitute proof that a difference in the variable causes differences in educational achievement. There might be several reasons why the performance of one group of students might differ from another. Only through controlled experiments with random assignment of students to groups can hypotheses about the causes of performance differences be tested.

## **NAEP 2005 SCIENCE OVERALL SCALE SCORE AND ACHIEVEMENT-LEVEL RESULTS FOR PUBLIC SCHOOL STUDENTS**

### **Overall Scale Score Results**

In this section student performance is reported as an average score based on the NAEP science scale, which ranges from 0 to 300. Scores on this scale are comparable from 1996 through 2005. Scales are created separately for each grade. Therefore, the scores across grades cannot be compared.

Prior to 2000, testing accommodations were not provided for students with special needs in NAEP state science assessments. For 2000, results are displayed for both the sample in which accommodations were permitted and the sample in which they were not permitted. Subsequent assessment results were based on the more inclusive samples. In the text of this report, comparisons to 2000 results refer only to the sample in which accommodations were permitted.

Tables 1-A and 1-B show the overall performance results of grades 4 and 8 public school students in North Carolina and the nation. The first column of results presents the average score on the NAEP science scale. The remaining columns show the scores at selected percentiles. A percentile indicates the percentage of students whose scores fell at or below a particular score. For example, the 25th percentile demarks the cut point for the lowest 25 percent of students within the distribution of scale scores. The scale score given is the score for students at the given percentile, not the average score for students within a percentile range.

Tables 2-A and 2-B also show the overall performance results of grades 4 and 8 public school students in North Carolina and the nation. The first column of results presents the overall average score on the NAEP science scale. The remaining columns show the average scale score for the three science subscales: physical science, Earth science, and life science. These results are not always consistent from one subscale to another or to the overall results, and may reflect differences in curricular emphasis.

## Grade 4 Scale Score Results

- In 2005, the average scale score for students in North Carolina was 149. This was not significantly different from that for students across the nation (149).
- In North Carolina, the average scale score for students in 2005 was not significantly different from that in 2000 (147). However, the average scale score for students in public schools across the nation in 2005 was higher than that in 2000 (145).

<b>Table</b>	<b>The Nation's Report Card 2005 State Assessment</b>
<b>1-A</b>	<b>Average science scale scores and selected percentiles, grade 4 public schools: 2000 and 2005</b>

Year and jurisdiction	Average Scale Score	10th Percentile	25th Percentile	50th Percentile	75th Percentile	90th Percentile
2000 <sup>1</sup>						
Nation (public)	148	103*	127*	151	173	190*
North Carolina	148	107	128	149	169	185

## Grade 8 Scale Score Results

- In 2005, the average scale score for students in North Carolina was 144. This was lower than that for students across the nation (147).
- In North Carolina, the average scale score for students in 2005 was not significantly different from that in 1996 (147).
- In the nation, the average scale score for students in 2005 was not significantly different from that in 1996 (148).
- In North Carolina, the average scale score for students in 2005 was not significantly different from that in 2000 (145). Similarly, the average scale score for students in public schools across the nation in 2005 was not significantly different from that in 2000 (148).

## Overall Achievement-Level Results

In this section student performance is reported as the percentage of students performing relative to performance standards set by the National Assessment Governing Board (NAGB). These performance standards for what students should know and be able to do were based on the recommendations of broadly representative panels of educators and members of the public.

In 2000 only, results were obtained for two student samples: one for which accommodations were permitted and one for which accommodations were not permitted. However, in the text of this report, comparisons to 2000 results refer only to the sample in which accommodations were permitted.

Tables 3-A and 3-B present the percentage of students at grades 4 and 8 who performed below *Basic*, at or above *Basic*, at or above *Proficient*, and at the *Advanced* level. Because the percentages are cumulative from *Basic* to *Proficient* to *Advanced*, they sum to more than 100 percent. Only the percentage of students performing at or above *Basic* (which includes the students at *Proficient* and *Advanced*) plus the students below *Basic* will sum to 100 percent (except for rounding).

## Grade 4 Achievement-Level Results

- In 2005, 25 percent of North Carolina's students performed at or above *Proficient*. This was not significantly different from the percentage of the nation's public school students who performed at or above *Proficient* (27 percent).
- In North Carolina, the percentage of students who performed at or above *Proficient* in 2005 was not significantly different from that in 2000 (23 percent).
- The percentage of students in North Carolina who performed at or above *Basic* was 65 percent. This was not significantly different from that in 2000 (64 percent).
- In North Carolina, the percentage of students who performed at or above *Basic* was not significantly different from that for the nation's public schools (66 percent).

## Grade 8 Achievement-Level Results

- In 2005, 22 percent of North Carolina's students performed at or above *Proficient*. This was smaller than the percentage of the nation's public school students who performed at or above *Proficient* (27 percent).
- In North Carolina, the percentage of students who performed at or above *Proficient* in 2005 was not significantly different from that in 1996 (24 percent).
- In North Carolina, the percentage of students who performed at or above *Proficient* in 2005 was not significantly different from that in 2000 (25 percent).
- The percentage of students in North Carolina who performed at or above *Basic* was 53 percent. This was not significantly different from that in 1996 (56 percent) and was not significantly different from that in 2000 (54 percent).
- In North Carolina, the percentage of students who performed at or above *Basic* was smaller than that for the nation's public schools (57 percent).

## **COMPARISONS WITH THE NATION AND PARTICIPATING STATES AND JURISDICTIONS**

Forty-five jurisdictions participated in the science assessment in 2005. These include 44 states and the Department of Defense Education Activity (DoDEA) schools (domestic and overseas). Previous NAEP reports presented results for the Department of Defense Dependents Schools (DoDDS) overseas and the Department of Defense Domestic Dependent Elementary and Secondary Schools (DDESS) in the United States separately. Data for the two jurisdictions in prior years have been retroactively combined to provide comparable data for the single DoDEA jurisdiction.

In 2003, NAEP changed the regional reporting groups to match the United States Census Bureau regions. North Carolina is part of the South Census Region. The following states and jurisdictions are in the South Census Region: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia and West Virginia.

### **Comparisons by Average Scale Scores**

Figures 2-A and 2-B compare the nation's (public) 2005 overall science scale scores at grades 4 and 8 with those of all other participating states and jurisdictions. The different shadings indicate whether the average scale score of a state or a jurisdiction was found to be higher than, lower than, or not significantly different from that of the nation (public) in the NAEP 2005 science assessment.

Tables 4-A and 4-B compare the nation's (public) 2005 overall science scale scores at grades 4 and 8 with those of all other participating states and jurisdictions. The different columns indicate whether the average scale score of a state or a jurisdiction was found to be higher than, lower than, or not significantly different from that of the nation (public) in the NAEP 2005 science assessment.

#### **Grade 4 Scale Score Comparisons Results**

- Students' average scale score in the nation's public schools were higher than the scores in 9 jurisdictions, not significantly different from those in 13 jurisdictions, and lower than those in 23 jurisdictions.

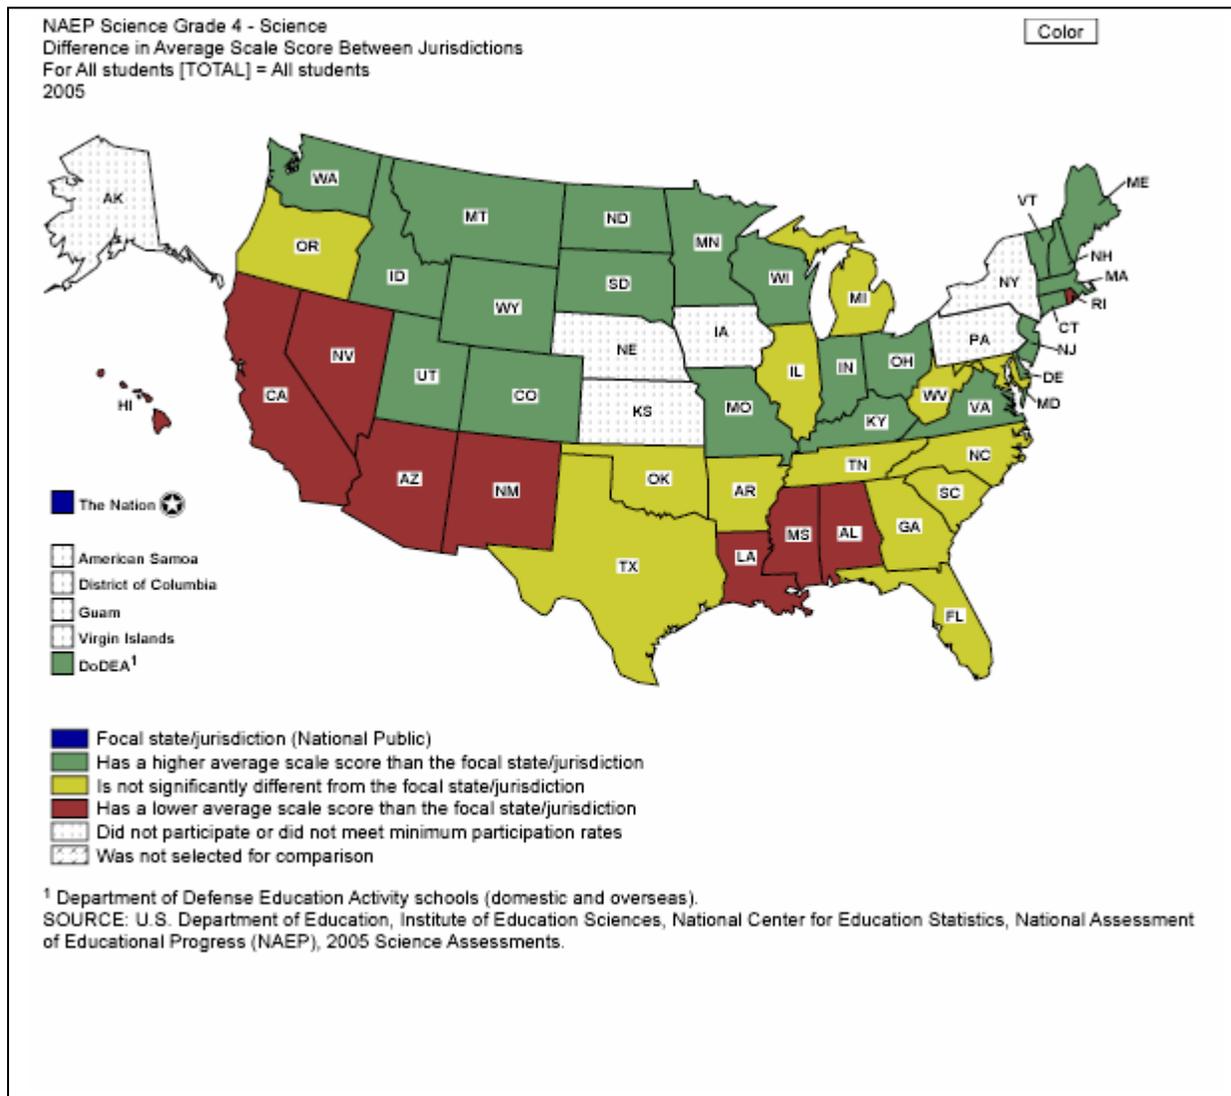

#### **Grade 8 Scale Score Comparisons Results**

- Students' average scale score in the nation's public schools were higher than the scores in 13 jurisdictions, not significantly different from those in 7 jurisdictions, and lower than those in 25 jurisdictions.

## SCIENCE PERFORMANCE OF SELECTED STUDENT GROUPS

This section of the report presents trend results for students in North Carolina and the nation by demographic characteristics. Student performance data are reported for

- gender
- race/ethnicity
- student eligibility for free/reduced-price school lunch

Definitions of NAEP reporting groups are available on the NAEP Web site (<http://nces.ed.gov/nationsreportcard/science/results2005/interpret-results.asp#RepGroups>).

Each of the variables is reported in tables that present the percentage of students belonging to each group in the first column and the average scale score in the second column. The columns to the right show the percentage of students below *Basic* and at or above each achievement level.

Differences between scores or percentages mentioned in the text are calculated using unrounded values. The result of subtracting the rounded values displayed in the tables may differ (usually by one point) from the results that would be obtained by subtracting the unrounded values.

The reader is cautioned against making causal inferences about the performance of groups of students relative to demographic variables. Many factors other than those discussed here, including home and school factors, may affect student performance.

NAEP collects information on many additional variables, including school and home factors related to achievement. All of this information is in an interactive database available on the NAEP Web site in the NAEP Data Explorer (<http://nces.ed.gov/nationsreportcard/nde/>).

## Gender

Information on student gender is reported by the student's school when rosters of the students eligible to be assessed are submitted to NAEP.

Tables 5-A and 5-B show average scale scores and achievement-level data for public school students at grade 4 and 8 in North Carolina and the nation, by gender. In 2000 only, results were obtained for student samples for which accommodations were permitted and those for which accommodations were not permitted. However, in the text of this report, comparisons to 2000 results refer only to the sample for which accommodations were permitted.

### Grade 4 Scale Score Results by Gender

- In 2005, male students in North Carolina had an average score that was higher than that of female students by 5 points. In 2000, the average score for male students was higher than that of female students by 5 points.
- In 2005, male students in North Carolina had an average scale score in science (151) that was not significantly different from that of male students in public schools across the nation (151). Similarly, female students in North Carolina had an average scale score (146) that was not significantly different from that of female students across the nation (147).
- In North Carolina, the average scale scores of both males and females were not found to differ significantly in 2005 from the scores in 2000.

### Grade 4 Achievement-Level Results by Gender

- In the 2005 assessment, 29 percent of males and 21 percent of females performed at or above *Proficient* in North Carolina. The difference between these percentages was statistically significant.
- The percentage of males in North Carolina's public schools who performed at or above *Proficient* in 2005 (29 percent) was not significantly different from that of males in the nation (30 percent).
- The percentage of females in North Carolina's public schools who performed at or above *Proficient* in 2005 (21 percent) was smaller than that of females in the nation (24 percent).
- In North Carolina, the percentages of both males and females performing at or above *Proficient* were not found to differ significantly in 2005 from the percentages in 2000.

**Table  
5-A**

### **Grade 8 Scale Score Results by Gender**

- In 2005, male students in North Carolina had an average score that was not found to be significantly different from that of female students. In 1996, there was no significant difference between the average score of male and female students.
- In 2005, male students in North Carolina had an average scale score in science (145) that was lower than that of male students in public schools across the nation (149). Female students in North Carolina had an average scale score (143) that was not significantly different from that of female students across the nation (145) in 2005.
- In North Carolina, the average scale scores of both males and females were not found to differ significantly in 2005 from the scores in 1996.
- In North Carolina, the average scale scores of both males and females were not found to differ significantly in 2005 from the scores in 2000.

### **Grade 8 Achievement-Level Results by Gender**

- In the 2005 assessment, 25 percent of males and 20 percent of females performed at or above *Proficient* in North Carolina. The difference between these percentages was statistically significant.
- The percentage of males in North Carolina's public schools who performed at or above *Proficient* in 2005 (25 percent) was smaller than that of males in the nation (30 percent).
- The percentage of females in North Carolina's public schools who performed at or above *Proficient* in 2005 (20 percent) was smaller than that of females in the nation (25 percent).
- In North Carolina, the percentages of both males and females performing at or above *Proficient* were not found to differ significantly in 2005 from the percentages in 1996.
- In North Carolina, the percentages of both males and females performing at or above *Proficient* were not found to differ significantly in 2005 from the percentages in 2000.

## **Race/Ethnicity**

Schools reported the racial/ethnic subgroup that best described the students eligible to be assessed. The six mutually exclusive categories are White, Black, Hispanic, Asian/Pacific Islander, American Indian/Alaska Native, and Unclassified. Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin.

Tables 6-A and 6-B show average scale scores and achievement-level data for public school students at grade 4 and 8 in North Carolina and the nation, by race/ethnicity. In 2000 only, results were obtained for student samples for which accommodations were permitted and those for which accommodations were not permitted. However, in the text of this report, comparisons to 2000 results refer only to the sample for which accommodations were permitted.

### **Grade 4 Scale Score Results by Race/Ethnicity**

- In 2005, White students in North Carolina had an average scale score that was higher than those of Black, Hispanic, and American Indian/Alaska Native students, but was not found to be significantly different from that of Asian/Pacific Islander students.
- The average scale scores of White, Black, and Hispanic students in North Carolina were not significantly different between 2000 and 2005.
- In 2005, Black students had an average score that was lower than that of White students by 31 points. In 2000, the average score for Black students was lower than that of White students by 32 points.
- In 2005, Hispanic students had an average score that was lower than that of White students by 23 points. In 2000, the average score for Hispanic students was lower than that of White students by 23 points.

### **Grade 4 Achievement-Level Results by Race/Ethnicity**

- In North Carolina in 2005, the percentage of White students performing at or above *Proficient* was greater than those of Black, Hispanic, and American Indian/Alaska Native students, but was not found to be significantly different from that of Asian/Pacific Islander students.
- The differences between the percentages of White, Black, and Hispanic students in North Carolina performing at or above *Proficient* in 2000 and the respective percentages in 2005 were not found to be significant.

# Estimate rounds to zero.

‡ Reporting standards are not met.

\* Value is significantly different from the value for the same jurisdiction in 2005.

<sup>1</sup> Accommodations were not permitted for this assessment.

<sup>2</sup> "Unclassified" students are those whose school-reported race was "other" or "unavailable," or was missing, and who self-reported more than one race category or none. The six mutually exclusive categories are White, Black, Hispanic, Asian/Pacific Islander, American Indian/Alaska Native, and Unclassified. Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin.

NOTE: The NAEP grade 4 science scale ranges from 0 to 300. All differences were tested for statistical significance at the .05 level using unrounded numbers. Detail may not sum to totals because of rounding. Performance comparisons may be affected by differences in exclusion rates for students with disabilities and English language learners in the NAEP samples and by changes in sample sizes.

## **Student Eligibility for Free/Reduced-Price School Lunch**

NAEP collects data on eligibility for the federal program providing free or reduced-price school lunches. The free/reduced-price lunch component of the National School Lunch Program (NSLP) offered through the U.S. Department of Agriculture (USDA) is designed to ensure that children near or below the poverty line receive nourishing meals. Eligibility is determined through the USDA's Income Eligibility Guidelines, and results for this category of students are included as an indicator of lower family income.

Tables 7-A and 7-B show average scale scores and achievement-level data for public school students at grade 4 and 8 in North Carolina and the nation, by eligibility for free/reduced-price lunch. In 2000 only, results were obtained for student samples for which accommodations were permitted and those for which accommodations were not permitted. However, in the text of this report, comparisons to 2000 results refer only to the sample for which accommodations were permitted.

### **Grade 4 Scale Score Results by Free/Reduced-Price Lunch Eligibility**

- In 2005, students in North Carolina eligible for free/reduced-price lunch had an average science scale score of 134. This was lower than that of students in North Carolina not eligible for this program (161).
- In 2005, students who were eligible for free/reduced-price school lunch had an average score that was lower than that of students who were not eligible for free/reduced-price school lunch by 26 points. In 2000, the average score for students who were eligible for free/reduced-price school lunch was lower than the score of those not eligible by 26 points.
- Students in North Carolina eligible for free/reduced-price lunch had an average scale score (134) in 2005 that was not significantly different from that of students in the nation who were eligible (135).
- In North Carolina, students eligible for free/reduced-priced lunch had an average science scale score in 2005 (134) that was not significantly different from that of eligible students in 2000 (131).

### **Grade 4 Achievement-Level Results by Free/Reduced-Price Lunch Eligibility**

- In North Carolina in 2005, 10 percent of students who were eligible for free/reduced-price lunch and 38 percent of those who were not eligible for this program performed at or above *Proficient*. These percentages were found to be significantly different from one another.
- For students in North Carolina in 2005 who were eligible for free/reduced-price lunch, the percentage at or above *Proficient* (10 percent) was not significantly different from the corresponding percentage for their counterparts around the nation (12 percent).
- In North Carolina, the percentage of students eligible for free/reduced-price lunch who performed at or above *Proficient* for 2005 (10 percent) was not significantly different from the corresponding percentage (9 percent) for 2000.

### **Grade 8 Scale Score Results by Free/Reduced-Price Lunch Eligibility**

- In 2005, students in North Carolina eligible for free/reduced-price lunch had an average science scale score of 129. This was lower than that of students in North Carolina not eligible for this program (154).
- In 2005, students who were eligible for free/reduced-price school lunch had an average score that was lower than that of students who were not eligible for free/reduced-price school lunch by 25 points. In 1996, the average score for students who were eligible for free/reduced-price school lunch was lower than the score of those not eligible by 29 points.
- Students in North Carolina eligible for free/reduced-price lunch had an average scale score (129) in 2005 that was not significantly different from that of students in the nation who were eligible (130).
- In North Carolina, students eligible for free/reduced-priced lunch had an average science scale score in 2005 (129) that was not significantly different from that of eligible students in 1996 (128).
- In North Carolina, students eligible for free/reduced-priced lunch had an average science scale score in 2005 (129) that was not significantly different from that of eligible students in 2000 (125).

### **Grade 8 Achievement-Level Results by Free/Reduced-Price Lunch Eligibility**

- In North Carolina in 2005, 10 percent of students who were eligible for free/reduced-price lunch and 30 percent of those who were not eligible for this program performed at or above *Proficient*. These percentages were found to be significantly different from one another.
- For students in North Carolina in 2005 who were eligible for free/reduced-price lunch, the percentage at or above *Proficient* (10 percent) was not significantly different from the corresponding percentage for their counterparts around the nation (12 percent).
- In North Carolina, the percentage of students eligible for free/reduced-price lunch who performed at or above *Proficient* for 2005 (10 percent) was not significantly different from the corresponding percentage (7 percent) for 1996.
- In North Carolina, the percentage of students eligible for free/reduced-price lunch who performed at or above *Proficient* for 2005 (10 percent) was not significantly different from the corresponding percentage (9 percent) for 2000.

## TOWARD A MORE INCLUSIVE NAEP: STUDENTS WITH DISABILITIES AND ENGLISH LANGUAGE LEARNERS

It is important to assess all students selected in the randomized sampling process, including students with disabilities (SD) and students who are classified by their schools as English language learners (ELL). Some students sampled for participation in NAEP can be excluded from the sample according to carefully defined criteria. School personnel, guided by the student's Individualized Education Program (IEP), as well as eligibility for Section 504 services, make decisions regarding inclusion of students with disabilities in the assessment. They also make decisions regarding inclusion of English language learners, based on NAEP's guidelines, by evaluating the student's capability of participating in the assessment given the available accommodations, and taking into consideration the number of years the student has been receiving instruction in English. The results displayed in this report and in other publications of the NAEP 2005 science results are based on representative samples that include SD and ELL students who were assessed either with or without accommodations, based on NAEP's guidelines.

Percentages of students excluded from NAEP may vary considerably across states, and, within a state, across years. Comparisons of results across states and within a state across years should be interpreted with caution if the exclusion rates vary widely. The percentages of assessed students classified as SD or ELL, as well as their NAEP performance in each participating state and jurisdiction, are available in an interactive database at the NAEP Web site (<http://nces.ed.gov/nationsreportcard/nde/>).

Prior to 2000, no testing accommodations were made available to the samples of students with disabilities and the English language learners in state NAEP science assessments that served as the basis for reported results. In the 1996 national and 2000 national and state science assessments, NAEP researchers drew a second representative sample of schools. Accommodations were made available for students in this sample who required them, provided the accommodation did not change the nature of what was tested. For example, students could be assessed one-on-one or in small groups, receive extended time, or use a large-print test book. In science, students had the option of having the test questions read aloud in English or an English-Spanish glossary. NAEP has used these comparable samples to study the effects of allowing accommodations for students categorized as SD or ELL in the assessments. A series of technical research papers covering various NAEP subject areas has been published with the results of these comparisons (see <http://nces.ed.gov/nationsreportcard/about/inclusion.asp#research>).

Tables 8–A and 8–B display the percentages of students with disabilities and English language learners in North Carolina identified, excluded, and assessed under standard and accommodated conditions at grades 4 and 8. The percentages in these tables are based on the total NAEP sample, including students who were excluded or not assessed.

Tables 9–A and 9–B show the percentage of students assessed in North Carolina by disability status and their performance on the NAEP assessment in terms of average scale scores and percentages performing below *Basic*, at or above *Basic*, at or above *Proficient*, and at *Advanced*

for grades 4 and 8. The denominator for the percentages in these tables is the total number of students assessed.

Tables 10–A and 10–B present the percentage of students assessed in North Carolina by ELL status, their average scale scores, and their performance in terms of the percentage below *Basic*, the percentages at or above *Basic*, at or above *Proficient*, and at *Advanced*.

Table 11 presents the total number of students assessed, the percentage of students sampled who were excluded, and average scale scores for all participating states and other jurisdictions.

**Table

## WHERE TO FIND MORE INFORMATION

### The NAEP Science Assessment

The latest news about the NAEP 2005 science assessment and the national results can be found on the NAEP Web site at <http://nces.ed.gov/nationsreportcard/science/results/>. The individual snapshot reports for each participating state and other jurisdictions are also available in the state results section of the Web site at <http://nces.ed.gov/nationsreportcard/states/>.

*The Nation's Report Card: Science 2005* may be ordered or downloaded at the NAEP Web site.

*The Science Framework for the 2005 National Assessment of Educational Progress*, on which this assessment is based, is available at the National Assessment Governing Board Web site at [http://www.nagb.org/pubs/s\\_framework\\_05/761907-ScienceFramework.pdf](http://www.nagb.org/pubs/s_framework_05/761907-ScienceFramework.pdf).

*The North Carolina NAEP Science Report* and the *North Carolina NAEP Science Snap Shot Reports* are available on the NCDPI Web site at <http://www.ncpublicschools.org/accountability/policies/naep/2>.

### Additional Results from the Science Assessment

For more findings from the 2005 science assessments, refer to the NAEP 2005 results at <http://nces.ed.gov/nationsreportcard/nde/>. The interactive database at this site includes student, teacher, and school variables for all participating states and other jurisdictions, the nation, and the four regions. Data tables are also available for each jurisdiction, with all background questions cross-tabulated with the major demographic variables. Users can design and create tables and can perform tests of statistical significance at this Web site.

### Technical Documentation

For explanations of NAEP's general survey procedures, see: Allen, N.L., Donoghue, J.R., and Schoeps, T.L. (2001). *The NAEP 1998 Technical Report*. (NCES 2001–509). Washington, DC: U.S. Department of Education, Office of Educational Research and Improvement, National Center for Education Statistics. Technical information for NAEP assessments may also be found on the NAEP Web site at (<http://nces.ed.gov/nationsreportcard/science/results2003/interpret-results.asp>).

Olson, J.F., and Goldstein, A.A. (1997). *The Inclusion of Students With Disabilities and Limited-English-Proficient Students in Large-Scale Assessments: A Summary of Recent Progress* (NCES 97–482). Washington, DC: U.S. Department of Education, Office of Educational Research and Improvement, National Center for Education Statistics.

Mazzeo, J., Carlson, J.E., Voelkl, K.E., and Lutkus, A.D. (2000). *Increasing the Participation of Special-Needs Students in NAEP: A Report on 1996 Research Activities* (NCES 2000–473). Washington, DC: U.S. Department of Education, Office of Educational Research and Improvement, National Center for Education Statistics.

Lutkus, A.D., and Mazzeo, J. (2003). *Including Special-Needs Students in the NAEP 1998 Reading Assessment, Part I: Comparison of Overall Results With and Without Accommodations* (NCES 2003–467). Washington, DC: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics.

Lutkus, A.D. (2004). *Including Special-Needs Students in the NAEP 1998 Reading Assessment, Part II: Results for Students With Disabilities and Limited-English-Proficient Students* (ETS-NAEP 04-R01). Princeton, NJ: Educational Testing Service.

### **To Order Publications**

Recent NAEP publications related to science are listed on the science page of the NAEP Web site and are available electronically. Publications can also be ordered from:

Education Publications Center (ED Pubs)  
U.S. Department of Education  
P.O. Box 1398  
Jessup, MD 20794–1398

Call toll free: 1-877-4ED Pubs (1-877-433-7827)  
TTY/TDD: 1-877-576-7734  
FAX: 1-301-470-1244

**The NAEP State Report Generator was developed for the NAEP 2005 reports by Phillip Leung, Anthony Lutkus, Paul Gazzillo, Mike Narcowich, Nancy Mead, Linda Myers, Mary Daane, and Bobby Rampey.**

## **What is the Nation's Report Card?**

The Nation's Report Card informs the public about the academic achievement of elementary and secondary students in the United States. Report cards communicate the findings of the National Assessment of Educational Progress (NAEP), the only continuing and nationally representative measure of achievement in various subjects over time. The Nation's Report Card compares performance among states, urban districts, public and private schools, and student demographic groups.

For over three decades, NAEP assessments have been conducted periodically in reading, mathematics, science, writing, history, geography, and other subjects. By making objective information available on student performance at the national, state, and local levels, NAEP is an integral part of our nation's evaluation of the condition and progress of education. Only information related to academic achievement and relevant variables is collected. The privacy of individual students is protected, and the identities of participating schools are not released.

NAEP is a congressionally mandated project of the National Center for Education Statistics within the Institute of Education Sciences of the U.S. Department of Education. By law, the Commissioner of Education Statistics is responsible for carrying out the NAEP project. The National Assessment Governing Board (NAGB) oversees and sets policy for NAEP. NAGB is an independent, bipartisan group whose members include governors, state legislators, local and state officials, educators, business representatives and members of the general public. NAGB's mission is, "to ensure equal access to education and to promote educational excellence throughout the nation."

## The National Assessment Governing Board

**Darvin M. Winick, Chair**

President  
Winick & Associates  
Dickinson, Texas

**Sheila M. Ford, Vice Chair**

Principal  
Horace Mann Elementary School  
Washington, D.C.

**Francie Alexander**

Chief Academic Officer  
Scholastic, Inc.  
Senior Vice President  
Scholastic Education  
New York, New York

**David J. Alukonis**

Chairman  
Hudson School Board  
Hudson, New Hampshire

**Amanda P. Avallone**

Assistant Principal and Eighth-  
Grade Teacher  
Summit Middle School  
Boulder, Colorado

**Honorable Jeb Bush**

Governor of Florida  
Tallahassee, Florida

**Barbara Byrd-Bennett**

Chief Executive Officer  
Cleveland Municipal School District  
Cleveland, Ohio

**Shirley V. Dickson**

Educational Consultant  
Laguna Niguel, California

**John Q. Easton**

Executive Director  
Consortium on Chicago School  
Research  
Chicago, Illinois

**David W. Gordon**

Sacramento County  
Superintendent of Schools  
Sacramento County Office of  
Education  
Sacramento, California

**Kathi M. King**

Twelfth-Grade Teacher  
Messalonskee High School  
Oakland, Maine

**Honorable Keith King**

Member  
Colorado House of Representatives  
Colorado Springs, Colorado

**Kim Kozbial-Hess**

Fourth-Grade Teacher  
Fall-Meyer Elementary School  
Toledo, Ohio

**Andrew C. Porter**

Director  
Learning Sciences Institute  
Vanderbilt University,  
Peabody College  
Nashville, Tennessee

**Luis A. Ramos**

Community Relations Manager  
PPL Susquehanna  
Berwick, Pennsylvania

**Mark D. Reckase**

Professor  
Measurement and Quantitative  
Methods  
Michigan State University  
East Lansing, Michigan

**John H. Stevens**

Executive Director  
Texas Business and Education  
Coalition  
Austin, Texas

**Mary Frances Taymans, SND**

Executive Director  
National Catholic Educational  
Association  
Washington, D.C.

**Oscar A. Troncoso**

Principal  
Socorro High School  
Socorro Independent School District  
El Paso, Texas

**Honorable Thomas J. Vilsack**

Governor of Iowa  
Des Moines, Iowa

**Michael E. Ward**

Former State Superintendent of Public  
Instruction  
North Carolina Public Schools  
Jackson, Mississippi

**Eileen L. Weiser**

Member, State Board of Education  
Michigan Department of Education  
Lansing, Michigan

**Grover J. Whitehurst (Ex-officio)**

Director  
Institute of Education Sciences  
U.S. Department of Education  
Washington, D.C.

**Charles E. Smith**

Executive Director, NAGB  
Washington, D.C.
